Chairman of the board
and director

JOHN GAMMON, PHD,
Director

Argentina Lithium & Energy believes that the combination of high geologic potential and a promising demand climate have set the conditions for delineating and advancing new lithium resources in Argentina. The Company's management group has a long history of success in the resource sector of Argentina and a strong track record of government and community relations.

INVESTMENT HIGHLIGHTS

- ~70,000 hectares of claims on four salars in the Lithium Triangle.
- Projects strategically located in pro-mining provinces Salta and Catamarca, near key infrastructure with year-round access.
- Aggressive exploration programs in 2022 and continued evaluation of new prospects.

● Argentina Lithium Projects ○ Other Lithium Projects

PROJECTS

Four under-explored projects in the heart of the Lithium Triangle in Argentina.

Brine mapping and drilling underway in 2022.

RINCON WEST

- 3,282 ha under option; 460.5 ha 100%-held
- Adjacent to Rincon Ltd. and Argosy Minerals lithium projects with proven reserves
- Excellent infrastructure including international highway, electric power corridor
- First drill program, 5 holes, underway
- First two holes returned positive results including:
225 to 380mg/L Li in 70m interval (RW-DDH-001) and
337 to 367 mg/L Li in 118m interval (RW-DDH-002)

POCITOS

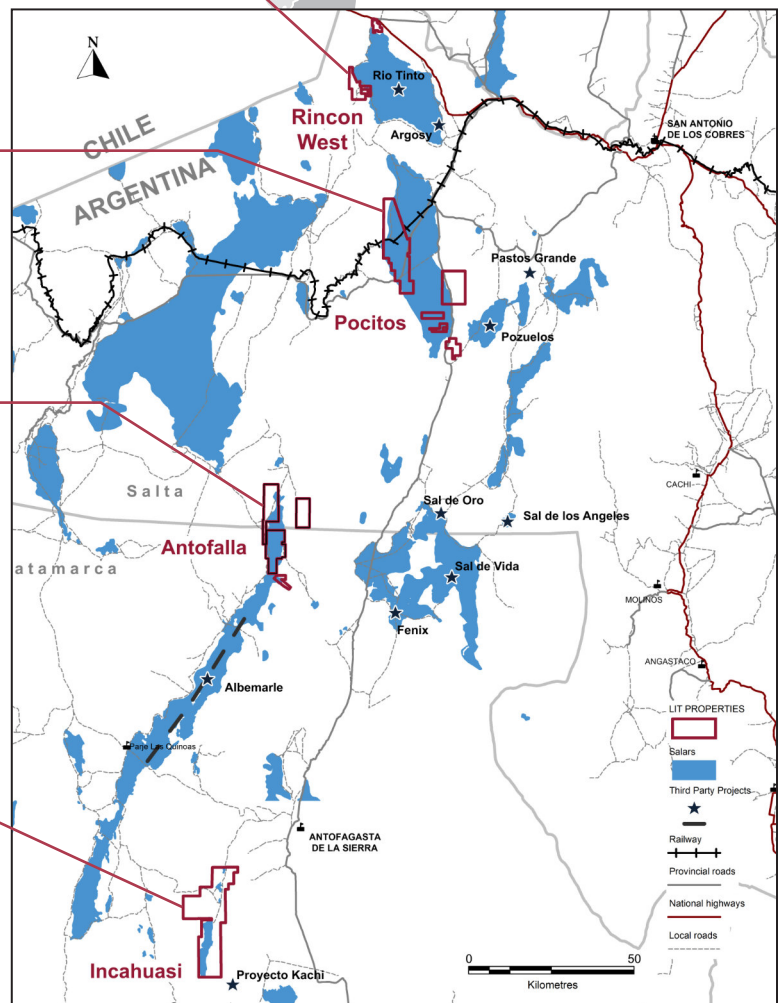

- +26,000 hectares under option
- Excellent infrastructure: International railway to Pacific ports crosses the property; Provincial highway and major gas pipeline nearby
- Limited historic exploration

ANTOFALLA NORTH

- >15,800 hectares of claims, 100% held & under option
- Major lithium producer Albemarle has large holdings starting 500m to the south
- Geophysical survey identified high-conductivity targets in upper 100 metres, additional targets at depth
- 110 line-km TEM survey planned to delineate brine targets, with drilling in 2023

INCAHUASI

- 100% interest in over 25,000 hectares
- Located north of Lake Resources' Kachi Project
- Maximum values 409 mg/L lithium and 1.56% potassium recovered in near-surface sampling (to 8m depth)
- 4 drill-holes confirmed lithium-bearing brines (average to date 109 mg/L Li, 6718 mg/L K)
